## Personal Statement

Aspiring software engineer currently pursuing a Bachelor of Science in Software Engineering. Passionate about building scalable applications and solving real-world problems through code. Seeking opportunities to apply technical skills and contribute to innovative projects.

## Education

- ✓ Bachelor of Science in Software Engineering
- ✓ Addis Ababa Science and Technology University
- ✓ Expected graduation: 2021 EC
- ✓ CGPA: 3.89/4.00

## Skills

- **Programming:** HTML/CSS, JavaScript, C++, SQL
- **Tools:** VS Code, CodeBlocks, Git, MySQL
- **Languages:** English(fluent), Amharic(Native)
- **Other :** Excellent at Mathematics

## Project

### ❖ **Project Name**: Property Rental Management System

**Description:**
console-based system which allows administrators to manage rental properties and enables users to search and view available houses.
**Programming language used**: C++, SQL
**Tools used:** CodeBlocks, MySQL

### ❖ **Project Name:** Enbla AASTU Food Ordering & Queue Management System

**Description:**
**Enbla** is an AASTU campus food ordering system that allows students to select locations, customize orders, and track preparation status in real-time. For launch owners, it provides secure role-based access to manage menus dynamically and update queue statuses with automatic memory cleanup.
**Tools Used**: C++, CodeBlocks

- **Project Name:** CLUB---CONNECT

**Description:**
ClubConnect is a web platform designed to serve as a central social hub for student clubs at Addis Ababa Science and Technology University (AASTU). It helps students discover events, manage their club activities, and trade items within the university community through an integrated marketplace.
**Tools Used**: HTML, CSS, JAVASCRIPT, Supabase

- **Project Name:** Movie Watchlist

**Description:**
A modern and responsive movie watchlist web application built using HTML5, CSS3, and JavaScript. The application allows users to discover movies through the TMDB API, explore detailed movie information, and save their favorite titles to a personalized watchlist. All watchlist data is stored locally using LocalStorage, ensuring persistence even after refreshing or reopening the browser.
